Art Unit: 2667

DETAILED ACTION

- 1. Figures 2A, 2B, and 2C should be designated by a legend such as --Prior Art--because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.
- 2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: reference numbers 1-4 in figures 2A, 2B, and 2C. Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and

Art Unit: 2667

informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 3. Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Schmidl et al. in view of Yonge, III et al.

With regarding to claim 15, Schmidl et al. discloses a method of restoring an orthogonal frequency division multiplexing (OFDM) signal by channel estimation, comprising steps of: estimating a sampling clock offset amount (column 8 lines 1-5, column 21 lines 1-12, column 21 lines 62-67, column 22 lines 1-27),

Art Unit: 2667

determining a sampling timing of the OFDM signal according to the estimated sampling offset amount (column 24 lines 18-21), and compensating for a rotated phase of the OFDM subcarrier due to the sampling clock offset in receiving the OFDM signal (column 24 lines 11-17). Schmidl does not show a step of estimating common phase noise. However, Yonge, III et al. reveals a method of estimating common phase noise (figure 8, column 10 lines 9-32). Since sampling clock offset and common phase noise are the two central issues that need to be resolved in order to precisely estimate the property of the transmission channel for restoring the OFDM signal, it would have been obvious to one of the ordinary skill in the art at the time of the invention to include in Schmidl a method or device to estimate phase noise due to the oscillator imperfection.

Allowable Subject Matter

4. Claims 1-14 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art fails to show or suggest a method or device for restoring an orthogonal frequency division multiplexing (OFDM) by estimating a transmission channel property of the OFDM signal from correlation between the m-th and m+1th symbols of the OFDM signal comprising all the elements and steps as recited in independent claims 1 and 8.

Art Unit: 2667

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - Ma et al. discloses a method for determining the frequency offset and sampling clock offset of the received OFDM signal.
 - Wright reveals a device for compensating phase noise due to local oscillator errors in an OFDM receiver.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tito Pham whose telephone number is 571-272-8617. The examiner can normally be reached on 8-5 PM M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chi Pham can be reached on 571-272-3179. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
